

## UPS Package Processing & Shipping Did you know?

### Timeliness is key!

As the first cog in the machine of UPS, you are an integral part of a global logistics network. One key aspect of your role is ensuring the timeliness of package scans. Whether you're entering a dropoff, retail, or AP package, these scans are crucial as they trigger real-time updates in the tracking system, allowing customers to monitor their package's journey accurately and ensuring accurate billing. Prompt scanning ensures that the system reflects the true status of each package, maintaining customer trust and satisfaction.

### Accuracy is key!

Your role in package processing is vital in providing an excellent customer experience. The accuracy of your data entry cannot be overstated. Every detail you input, from the recipient's address to the package's weight and dimensions, plays a critical role in the shipping process. Accurate data ensures proper routing, pricing, and delivery, thereby minimizing errors and delays. It's essential to double-check the information you input, as any error can lead to delays or billing adjustments to account for the mistake.

### Leveraging UPS API-Integrated Software

PEC's Total System software is integrated heavily with UPS APIs, designed to streamline your workflow and enhance the efficiency of package processing. This software is a powerful tool in your hands. It connects your actions directly with the broader UPS system, ensuring that the data you input is instantly synchronized across the network. These systems help across all steps of package processing including address accuracy, package rates, guaranteed delivery times, etc.

### Free training is available!

PEC offers various training materials on our website on top of free remote training sessions with our package processing and software experts. Have an unexpected change in employees? Need a refresher course before peak shipping? PEC can ensure you're on top of your game with a quick 30 minute phone training session.

## Q4 2023 Rebate Checks Are Hitting Your Mailboxes

Over the past 4 consecutive quarters PEC has disbursed over 1 million dollars in rebates per quarter to you, our national network of UPS Authorized Service Provider retail shippers. This check represents your UPS drop off package volume and Access Point package volume and the number of stores that have added and embraced the Access Point service. These types of packages are continuing to show double digit volume percentage increases quarter over quarter and year over year. Your rebates are continuing to increase due to the volume increases. Keep in mind every retail package, RPDO package, and AP package coming into your store is being carried in by a person. UPS performed a 3rd party survey which showed 30% of the time that person makes a purchase in your store while shipping their package at your store, not to mention the potential for future visits to your store and future consequential or planned purchases.

# Bring Your Own Device A Great Addition To Processing AP Packages

Bringing the all-new UPS Access Point service to the Package Express Center National Network has been a very exciting process and has come with a lot of new and exciting opportunities for our centers. PEC is dedicated to making the addition of this service as smooth and successful as possible. This program is not simply another type of package that you can accept, but another way to get a customer in your store. It's very important as a business owner/manager to recognize this opportunity and capitalize on it.

While the Access Point service is no more difficult than the package processing you're familiar with, it is still important to make this process quick, clean, and easy for your customer to provide the best experience. Access Point package processing can be greatly simplified by BYOD (Bring Your Own Device). UPS has directly responded to request from existing Access Point service providers by allowing external devices to be used for scanning. Do you have an old device lying around gathering dust? Put it to use! The UPS Access Point mobile app is available on the Google Play Store and Apple App Store. Package Express will assist you in registering your device with UPS to begin scanning Access Point packages. Doing this does not prevent you from using your computer to check in these packages. You can install the UPS Access Point app on multiple devices and use them all simultaneously while having all of the functionality of processing them on your computer! This can be extremely helpful in cases where the driver delivers packages far from your shipping counter. You can also check your package inventory on-the-go. This includes packages scanned by any of your devices.

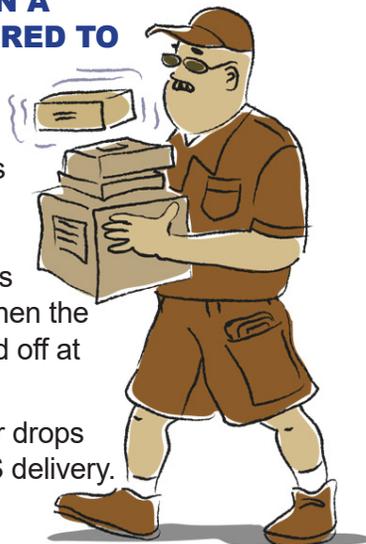

Call Package Express Centers today to register your devices for the Access Point BYOD. Please be prepared with the full model name/number of the device along with the serial number. Finding this information will vary for most devices, so you may need to do a quick internet search if you're not familiar with your device's settings.

## KNOWING WHEN TO SCAN UPS ACCESS POINT PACKAGES

There are two instances when you scan the packages...  
When they are dropped off and when they leave your location.

### ALWAYS SCAN WHEN A PACKAGE IS DELIVERED TO YOUR LOCATION

- Whenever the UPS driver drops packages off, you need to scan them in and take possession. This helps the customer know when the packages are dropped off at your location.
- Whenever a customer drops off a package for UPS delivery.

### ALWAYS SCAN WHEN A PACKAGE LEAVES YOUR LOCATION

Scan when the package is:

- Picked up by the customer.
- Returned to UPS:
  - Scan when the package is over 8 days old and needs to be returned.
  - Scan when UPS request the package be returned.
